BRITISH AIRWAYS

This form must be completed in all cases when there is un-remediated residual risk, which requires formal acceptance from the CIDO (Cyber Risk Owner – CRO), Director of Cyber and IT Risk (CISO) or relevant BA stakeholders. To assist with understanding of the residual risk, cyber risk should be articulated in business terms, outlining missing security controls and potential impact to our business if the risk materialises.

If you require assistance or once completed, please submit this to cyber.riskmanagement@ba.com for review.

iOps data and integration – Mercury 1.0

Cyber Risk Title

Network connectivity between Prod and Non-Prod environment

Context

Completed By:

Vinoth Anandan(Vinoth.1.anandan@ba.com)

Date:

15-06-2026

Provide a concise summary of the system(s) or product(s) the risk relates to:

The risk relates to establishing controlled network connectivity between the ODIE Mercury 1.0 platform (downstream system hosted in an AWS Dev account) and the AirOps Production Oracle database (upstream system). This integration will enable automated data ingestion for the Aircraft Restriction and Curfew data product.
Systems involved:

- AWS Mercury 1.0 (Dev Account – Downstream)
- AirOps Oracle Database (Production – Upstream)

Provide a concise summary of the control gap(s) or failing(s):

Currently, there is no connectivity between the AirOps Production Oracle database and the Mercury 1.0 Dev environment. Due to this gap, data ingestion is performed manually by Data Analysts, requiring daily file extraction and upload to S3. This introduces operational and control weaknesses, including reliance on manual processes, risk of delays or missed uploads, and lack of system-driven validation and monitoring.

BRITISH AIRWAYS

Detail the business request:

For mentioned data product, DAs currently upload the AirOps input file manually to S3 on regular basis. To automate ingestion from the Oracle database, an EW network firewall setup must be done to allow our ODIE Lambda traffic.
Since this is currently a manual daily activity performed by DAs, any failure or delay in uploading the file may impact downstream consumers who rely on the processed output file.

Describe the business impact to BA of not approving this risk:	The business request is to enable automated ingestion of Aircraft Restriction and Curfew data from the <u>AirOps</u> Oracle database into the Mercury 1.0 platform. This requires establishing a controlled east-west (EW) network firewall rule to allow scoped, secure access from Mercury 1.0 AWS Lambda functions (Dev environment) to the <u>AirOps</u> Production database. The access will be required to the endpoint and used solely for data retrieval purposes. Automation will remove the current dependency on manual file uploads by Data Analysts and improve data timeliness, reliability, and consistency for downstream consumers.
Does this impact any other IAG OpCo's?	No

Risk Timeline

Is this a new or existing risk?	Existing
If New when does this become a risk?	N/A

Cyber Risk Description

Event (There is a risk to / of.....)	There is a risk to availability of Aircraft restrictions and curfew data
Cause (This is due to)	This is due to the absence of existing secure network connectivity between the <u>AirOps</u> Production Oracle database and the Mercury 1.0 AWS Dev environment. As a result, data ingestion is currently dependent on a manual process where Data Analysts extract data and upload files to S3 on a regular basis, creating a reliance on human intervention instead of system-driven integration.
Consequence (This could result in / lead to)	This could result in operational inefficiencies and increased risk of delays, missed uploads, or human errors in the data extraction process. Such disruptions may lead to incomplete or delayed data availability for downstream consumers, impacting dependent systems and business operations, and potentially resulting in escalations and reduced confidence in the data platform.
Has a Cyber Visa been completed for this application?	Yes/No (if "yes", please include a hyperlink. If "no" please provide justification)

BA Impact

Does this risk relate to critical data or regulated systems?

Compliance Criteria	Y/N	Detail
Personal Identifiable Information (PII)	N	NA
Payment Card Information (PCI DSS)	N	NA

Type	Y/N	Detail
Data Classification	Y	Internal

Type	Y/N	Detail
Aviation Cyber Regulation	Y/N	CAA/NIS/ICFR/PART-IS N/A
Critical Systems Category	Y/N	CS1/CS2 N/A
Service Level Category	Y/N	SL1/SL2/SL3/SL4 (if not applicable please justify)

Risk Mitigation Plan

What cyber controls are required to mitigate this risk during the risk acceptance period?

What cyber controls are required to mitigate this risk during the risk acceptance period?
(These should link to the missing cyber controls or be an additional compensating control).

Risk Mitigation Control / Activity	Is this currently implemented (Y/N)	Detail (If 'Y' then how, when and by whom. If 'N' then why?)
AWS Lambda	Yes	We have developed a lambda function with required configuration, logic, transformation and validation. Currently the database connectivity establishment is pending.

Risk Remediation Plan

What activity is planned to meet the required cyber standard by the end of the risk acceptance duration?

Risk Remediation Activity	Timeline	Responsible Person
Connectivity test	23-06-2026	Platform engineer, Data engineer

To Be Completed By The BA Cyber Team

Cyber Threat

Completed By:

Date:

Exploitability At Large	e.g. Low no evidence this is being exploited in the wild
Exploitation At BA	e.g. High due to lack of network segmentation (Cyber Visa)
Threat Actor Capability	e.g. High it requires sophisticated capability to materialise

Residual Risk Based on Agreed Mitigation Plan

Completed By:

Date:

Risk Factor	Rating (Select One)*	Explanation (why)
Impact	Manageable / Moderate / Serious / Critical	
Likelihood	Remote / Possible / Probable / Likely	
Residual Risk:	Low / Medium / High / Very High	

Risk Action

The CRO/CISO must choose one of the 4 risk actions to take based on information provided above.

☐	TREAT:	
☐	TOLERATE:	
☐	TRANSFER:	
☐	TERMINATE:

Declaration

I/we confirm that I/we am/are fully aware of the cyber risk articulated about BA's operation, systems, data and finances, as documented above.

In my role as [CRO/CISO] on behalf of British Airways, I/we agree to accept this cyber risk in line with the risk mitigation and remediation plans.

Risk, Likelihood, and Impact Ratings

*Approval Levels

PII Related	Data Protection Officer
PCI related	PCI Data Owner
Aviation Regulated Systems	CSRM
Low/Medium Risks	CISO
High/Very High Risks	CRO

		Likelihood			
		1	2	3	4
Impact		Remote	Possible	Probably	Likely
	4 Critical	High	High	Very High	Very High
	3 Serious	Medium	Medium	High	High
	2 Moderate	Low	Medium	Medium	Medium
	1 Manageable	Low	Low	Low	Low

Impact All aspects of potential impact (customer impact, reputational impact, operational impact, regulatory impacts, and potential fines) to be considered before selecting Financial figures. For any Aircraft safety / security risk, the impact would be critical.

Likelihood		
Score	Description	Definition
1	Remote	Risk event is less than 25% likely to occur within the next 2 years
2	Possible	Risk event is 25-50% likely to occur within the next 2 years
3	Probably	Risk event is 50-75% likely to occur within the next 2 years
4	Likely	Risk event is more than 75% likely to occur within the next 2 years
